

Adjustable Banner Display Stand, 63"–120" W x 48"–120" H Step and Repeat

OVERVIEW

The 2-BD120 Adjustable Banner Display Stand is a heavy-duty expandable backdrop frame designed for step-and-repeat banner installations. Built from thick aluminum extrusions with reinforced plastic hardware, it is suited for trade show booths, corporate events, conferences, and retail environments requiring a professional branded backdrop.

The stand features a telescoping aluminum pole system with graduated diameters (up to 3.8 cm at the base, stepping down through 3.4 cm and 3.0 cm sections) to provide structural stability across a wide range of configurations. The frame ships as a two-piece set with a net weight of 6.8 kg per set, packaged in dual carry bags for transport and storage. The black anodized finish maintains a clean, neutral appearance behind printed banner graphics.

No certifications are confirmed in the available source documentation for this product. Contractors and event coordinators should verify compliance requirements with their venue or jurisdiction prior to specification. Warranty terms are not stated in the current source data; contact Poli LED & Signs for applicable coverage details.
