

Steel Cross Base with Screw Fixing, No Bearing, Black Finish

OVERVIEW

The 2-FP-B-Cross1-BK is a steel cross base designed for flagpole and display hardware installations. Its cross-profile geometry distributes load across four contact points, providing a stable foundation for freestanding poles and banner systems in commercial and event environments. The black powder-coat finish suits both indoor and outdoor deployments.

Constructed from steel with a screw-fixing mechanism, the base secures without the need for additional bearings, simplifying installation and reducing component count. Finished dimensions are 4 x 4 x 2 in. with a unit weight of 50.74 lb, making it a substantial, low-profile anchor suitable for equipment foundations and display structures requiring reliable lateral stability.

No certifications have been confirmed for this product in available documentation. Contractors and specification engineers should verify compliance requirements with applicable local codes prior to installation. Warranty terms are not specified in current source data; contact Poli LED & Signs for applicable coverage details.
