

Steel Spike Base with Bearing for Flying Flag Poles, 23.5 in. Length

OVERVIEW

The 2-FP-B-Spike is a steel spike base with integrated bearing, designed to anchor flying flag poles in ground-level installations. The spike configuration allows direct insertion into soil or turf, making it suitable for temporary or semi-permanent flag displays at commercial properties, job sites, dealerships, and outdoor events.

The bearing assembly enables the pole to rotate freely in response to wind direction, reducing flag tangling and wear on the fabric. Constructed from steel, the base is intended for both indoor and outdoor use. Assembled dimensions are 25 in. x 8 in. x 4 in., with a unit weight of 45.32 oz. The design supports straightforward assembly and disassembly for relocation between sites.

No certifications or compliance listings are confirmed for this product. No warranty terms are available in the current product data. Contractors and property managers should verify suitability for local installation requirements prior to procurement.
