

## Aluminum Square Pole, 4-Sided Ditch, 10 ft Length, 40mm Cross-Section

### OVERVIEW

---

The 4-PS4-10 is a 10 ft aluminum square pole designed for use in commercial signage, display systems, and lighting support structures. With a 40 mm cross-section profile, it is suited for contractors and property managers requiring a lightweight yet rigid structural member for outdoor and interior installation applications.

Constructed from aluminum, the pole offers inherent corrosion resistance and reduced maintenance requirements compared to steel alternatives. At 0.28 kg/m, the profile is manageable for single-person handling and field cutting. The 40 mm square cross-section provides multi-directional load resistance appropriate for sign mounting and display framing applications.

No certifications have been confirmed in the available source documentation for this product. Contractors should verify compliance requirements with applicable local codes prior to specification. Warranty terms are governed by the supplier's standard sales conditions; contact Poli LED & Signs directly for project-specific documentation.
