

Steel Corner Connectors for 48mm Fabric Frame, Big and Small Pairs

OVERVIEW

The 5-F48-CN Steel Corner Connector set is a hardware accessory designed for use with 48mm fabric frame extrusion systems. The kit includes four large steel corner pieces (45 x 13 x 1.5mm) and four small steel corner pieces (40 x 7.5 x 1.5mm), providing 90-degree structural connections at frame joints. These connectors are intended for commercial display, exhibition, and signage fabric frame assemblies.

All components are fabricated from steel at 1.5mm thickness, providing rigid reinforcement at frame corners. The two-size configuration accommodates both primary structural joints and secondary connection points within the frame system. Components are precision-formed to maintain consistent fit within compatible fabric frame extrusion profiles.

No certifications, compliance listings, or warranty terms are confirmed in the available source data for this product. Installers should verify compatibility with the specific extrusion profile series prior to ordering.
