

Single-Sided Aluminum Frame for Fabric Signs, 30×40mm Profile

OVERVIEW

The 5-FE30-10 is a single-sided aluminum extrusion frame system designed for use with fabric signage and display graphics. With a 30×40mm profile, it is suited for commercial interior display applications including retail environments, exhibitions, and trade show installations where a clean, tensioned fabric presentation is required.

The frame is constructed from aluminum extrusion stock, consistent with the fabric frame system components detailed in the Poli LED & Signs display catalog. As a single-sided system, it accommodates one fabric graphic face, secured via silicone bead and groove retention along the profile channel.
