

Linear Rod Base and Holder, 360° Rotating Mount, Black, Set of 2

OVERVIEW

The 5-LR-Base-B is a rod base and holder set designed for mounting linear LED light strips in commercial and residential applications. Constructed from zinc alloy and stainless steel, the set supports direct lighting, indirect lighting, and wall-washing configurations. The 360° rotating base structure combined with a 90° side-rotating cardan shaft allows flexible positioning to suit a range of installation geometries.

The mounting system accommodates steel strip runs up to 25 meters and is compatible with 12V and 24V LED strip configurations. The base hardware includes ball-head rods, expansion plugs, screws, and installation tools. Wall installation requires minimal surface modification. The black finish suits professional environments where a clean, low-profile appearance is required.

No certifications are confirmed in the available source data. Consult the manufacturer documentation for compliance and warranty terms applicable to your jurisdiction.

SPECIFICATIONS

Power	10 W	Input voltage	24V V
CRI	80	Beam angle	180 °
