

Silicone Flex Tube Channel, 20x20mm Profile, Front-Emitting, Fits 10–12mm PCB

OVERVIEW

The 5-LS2020 is a silicone flex tube channel designed to house and protect flexible LED strip assemblies in commercial and architectural lighting applications. The profile measures 20x20mm in cross-section and accommodates PCB widths of 10mm and 12mm, making it compatible with a range of standard flex strip formats. Supplied in 10-meter rolls, it is suited for runs requiring a front-emitting light output direction.

Constructed entirely from silicone, the channel offers flexibility for curved or irregular mounting surfaces while providing mechanical protection and diffusion for the LED strip. No adhesive liner or LED strip is included; the tube is sold separately from the strip itself.

SPECIFICATIONS

Dimensions	20x20 mm	Material	silicone
