

## Surface Mount Frame for 2x2 ft LED Flat Panels, 55mm Depth, White

### OVERVIEW

The 9-PZ-FRAME-2x2 is a surface mount kit designed to convert 2x2 ft EdgeLit and BackLit LED flat panels from recessed to surface-mounted installations. With a 55mm profile depth and a clean white finish, the frame is suited for commercial and industrial ceiling applications where recessed mounting is not feasible, such as concrete decks, exposed structure, or retrofit scenarios.

The frame is constructed to securely retain standard 2x2 ft flat panels in a fixed surface position. Carton packaging accommodates 25 units per master carton with a gross weight of 19.8 kg, indicating a robust steel or aluminum construction appropriate for commercial-grade installations. No electrical components are included; the kit functions solely as a mechanical mounting assembly.

No certifications are confirmed in the available source documentation for this mounting frame. Contractors should verify compatibility with the specific flat panel model prior to installation. Consult Poli LED & Signs for warranty terms and applicable compliance documentation before specifying this product.
