

New Construction Mounting Plate, 4-Inch Round Hole with Hanger Bar and Lips

OVERVIEW

The A-Z-PLATE4-DH is a new construction mounting plate designed for 4-inch recessed LED downlights. It includes an integrated hanger bar and formed lips for secure fixture support during rough-in installation in new construction ceiling applications.

Constructed from galvanized sheet steel, the plate provides corrosion resistance suitable for standard commercial and residential new construction environments. The round 4-inch hole accommodates compatible recessed downlight housings, and the hanger bar allows for span mounting between joists or framing members.
