

WPC No-Gap Composite Decking Board 144 x 5.7 x 0.9 In. – Antique

OVERVIEW

The B-D1-AT is a WPC (Wood Composite Polymer) no-gap composite decking board in the Antique color finish, designed for outdoor decking applications including patios, walkways, and commercial exterior surfaces. Each board measures 144 in. x 5.7 in. x 0.9 in. and is produced using co-extrusion technology, in which a high-tech polymer outer layer and a high-density recycled plastic and wood fiber inner layer are extruded simultaneously. The seamless no-gap design reduces the risk of accidents and loss of small objects through the deck surface.

The co-extruded polymer outer layer provides 360-degree protection with UV resistance, anti-scratch and wear resistance, stain resistance, and a slip-resistant 3D wood-grain texture. The product carries a waterproof environmental rating and is rated for a 25-year service life. Installation uses a patented hidden side-clip system compatible with standard decking joists, requiring no face screws on the board surface.

The manufacturer lists a 5-year warranty on this product. Certifications noted in the datasheet include CE, SGS, and ISO; however, specific certification numbers and scope have not been confirmed in the available source documentation and should be verified with the manufacturer prior to specification.

SPECIFICATIONS

Material	WPC (Wood Composite Polymer)	Warranty	5 years
Length In	144 in	Certifications	CE, SGS, ISO
Width In	5.7 in	Colors Available	Ashwood, Antique, Teak, Walnut, Ipe, Dark Grey
Height In	0.9 in	Waterproof	Waterproof
Weight Lb	22 lb	Eco Friendly	100% eco-friendly
Lifetime Years	25 years		

INSTALLATION
