

WPC No-Gap Exterior Decking Board 144 x 5.7 x 0.9 In. – Ipe Finish

OVERVIEW

The B-D1-IPE is a WPC (Wood Composite Polymer) exterior decking board finished in an Ipe wood tone, engineered for outdoor decking applications including patios, walkways, and commercial exterior surfaces. Each board measures 144 in. x 5.7 in. x 0.9 in. and is produced using a co-extrusion process that bonds a high-density recycled plastic and wood fiber core with a protective polymer outer layer, providing 360-degree surface coverage and a 3D wood-grain texture.

The co-extruded construction delivers waterproof performance, UV resistance, and improved scratch and wear resistance compared to standard composite decking. The no-gap seamless design eliminates the spacing found in traditional decking profiles. The product is rated for a 25-year service life and is described as 100% eco-friendly, stain-resistant, and requiring no routine maintenance. Installation uses a patented hidden side-clip system compatible with standard decking joists.

The manufacturer lists a 5-year warranty on this product. CE, SGS, and ISO certifications are referenced in the datasheet; however, specific certification numbers and scope have not been independently confirmed. Buyers requiring documentation for specification submittals should request current certificates from the supplier.

SPECIFICATIONS

Material	WPC (Wood Composite Polymer)	Lifetime Years	25 years
Length In	144 in	Warranty	5 years
Width In	5.7 in	Color Option	IPE
Height In	0.9 in	Certifications	CE, SGS, ISO
Weight Lb	22 lb	Waterproof	Waterproof

INSTALLATION
