

WPC Co-Extruded Deck Edge Board, Teak, 86.6 x 2.75 x 0.43 In., Waterproof

OVERVIEW

The B-D1-TK-EDGE is a co-extruded WPC (Wood Plastic Composite) deck edge board in a Teak finish, designed for exterior decking applications. It measures 86.6 x 2.75 x 0.43 inches and is suited for residential and commercial outdoor installations requiring a clean, finished perimeter edge.

Constructed using a dual-layer co-extrusion process, the board combines a high-density recycled plastic and wood fiber inner core with a polymer outer coating that provides 360-degree surface protection. The outer layer delivers UV resistance, anti-scratch and wear resistance, stain resistance, and a slip-resistant 3D wood grain texture. The product is rated waterproof and fire retardant, and requires no ongoing maintenance.

SPECIFICATIONS

Material	WPC (Wood Composite Polymer)	Weight	10 lb
Length	86 in	Warranty	5 years
Width	2.75 in	Lifetime Years	25 years
Height	0.43 in
