

Flexible MCM Wall Tile, Concrete Grey, Fire-Retardant & UV Resistant, 2x4 ft

OVERVIEW

The B-FW-FLX-CG is a flexible MCM (Modified Clay Material) wall tile designed for commercial and architectural surface applications. Unlike conventional ceramic or porcelain tile, this product is manufactured from modified clay through a temperature-controlled molding and irradiation cross-linking process, resulting in a lightweight, flexible sheet format. It is suited for exterior and interior wall cladding, including high-rise facades, old building renovation, external insulation system finishes, and irregular surfaces such as curved walls and arched columns.

The tile is available in multiple panel sizes and carries a concrete grey finish. Its flexible construction allows it to conform to non-planar substrates where rigid tile would not be practical. No certification data was confirmed in the available source documentation; buyers should request current test reports for fire, UV, and compliance requirements applicable to their jurisdiction.

SPECIFICATIONS

Material	MCM	Weight	2 kg
Dimensions	1200 x 600 x 50 mm
