

Flexible MCM Wall Tile, Fire-Retardant & UV Resistant, Indoor/Outdoor, Rough Coal

OVERVIEW

The B-FW-FLX-RC is a flexible MCM (Modified Clay Material) wall tile designed for both exterior and interior building decoration applications. Unlike conventional ceramic or porcelain tile, this material is produced from modified clay through a temperature-controlled molding and irradiation cross-linking process, resulting in a flexible surface panel suited for curved walls, arched columns, high-rise facade systems, external insulation finish systems, and irregular building surfaces.

The tile is well-suited for urban renovation and new construction projects where rigid materials are impractical. Its flexible composition allows it to conform to non-planar substrates without the cracking or installation limitations associated with traditional masonry finishes.

SPECIFICATIONS

Dimensions	1200 x 600 x 50 mm	Weight	2 kg
