

Flexible MCM Wall Tile, Fire-Retardant & UV Resistant, Indoor/Outdoor, Smooth Brick

OVERVIEW

The B-FW-FLX-SB is a flexible MCM (Modified Clay Material) wall tile designed for both exterior and interior building decoration applications. Unlike conventional ceramic or porcelain tile, this material is formed from modified clay through a temperature-controlled molding and irradiation cross-linking process, resulting in a lightweight, flexible surface panel suited for facades, curved walls, arched columns, and irregular building surfaces. It is particularly applicable to high-rise exterior cladding, external insulation system finishes, and urban renovation projects.

The tile is available in multiple panel sizes and colorways to accommodate large-format facade work as well as standard wall applications. Its flexible composition allows installation on surfaces where rigid tile would be impractical or structurally unsuitable.

SPECIFICATIONS

Dimensions	1200 x 600 x 50 mm	Material	MCM
Weight	2 kg
