

## Flexible MCM Wall Tile, Fire-Retardant & UV Resistant, Indoor/Outdoor, 2x4 ft

### OVERVIEW

The B-FW-FLX-SM is a flexible MCM (Modified Clay Material) wall tile designed for both exterior and interior building decoration. Unlike conventional ceramic or porcelain tile, this product is manufactured from modified clay through a temperature-controlled molding and irradiation cross-linking process, resulting in a lightweight, flexible surface material. It is suited for high-rise exterior facades, old building renovation, external insulation system finishes, curved walls, arched columns, and other irregular surfaces where rigid tile is not practical.

The flexible construction allows the tile to conform to non-planar substrates, making it a practical choice for specification engineers and contractors working on complex facade or retrofit projects. The material is noted for indoor and outdoor suitability, including exterior wall applications where dimensional stability and surface durability are required.

### SPECIFICATIONS

<b>Dimensions</b>	1200 x 600 x 50 mm	<b>Weight</b>	2 kg
