

## Flexible MCM Wall Tile, Fire-Retardant & UV Resistant, Indoor/Outdoor, White

### OVERVIEW

The B-FW-FLX-WT is a flexible MCM (Modified Clay Material) wall tile designed for both exterior and interior building decoration applications. Unlike conventional ceramic or porcelain tile, this product is formed from modified clay through a temperature-controlled molding and irradiation cross-linking process, resulting in a lightweight, flexible surface material. It is well suited for high-rise exterior facades, old building renovation projects, external insulation system finishes, and irregular surfaces such as curved walls and arched columns.

The flexible construction allows installation on substrates where rigid tile would be impractical, making it a practical choice for complex architectural geometries. Available panel dimensions include configurations up to 3200mm x 1200mm, with smaller format options also available to suit varied layout requirements.
