

Exterior Slatted WPC Corner Panel, Black, 2900x50x50mm

OVERVIEW

The B-W1-Corner-B is an exterior slatted WPC (Wood-Plastic Composite) corner panel in black, designed for outside corner transitions in commercial and architectural cladding applications. At 2900x50x50mm, it provides a clean, finished edge where flat wall panels meet, maintaining a consistent slatted profile around building corners.

The panel is constructed from a wood-plastic composite formulation rated for exterior use, offering waterproof performance and fire retardant properties with zero ongoing maintenance requirements. It is available in four colorways — Black, Grey, Light Brown, and Dark Brown — allowing coordination across a full facade system.
