

Exterior Slatted WPC Panel, Light Gray, Waterproof & Fire Retardant, 114x9x1 in.

OVERVIEW

The B-W1-G is a slatted wood-plastic composite (WPC) exterior wall panel in grey, manufactured from recycled PVC and wood fiber. Designed for exterior cladding applications, it is suited for commercial and residential facades, accent walls, and architectural finish work where a natural wood appearance with low maintenance is required.

The panel measures 114.17 in. x 8.66 in. x 1.02 in. and is constructed to be waterproof and fire retardant, requiring zero ongoing maintenance. The WPC composition provides resistance to moisture, rot, and the dimensional instability associated with natural wood, making it appropriate for exposed exterior environments.
