

Exterior Slatted WPC Panel, Teak Light Brown, Waterproof & Fire Retardant, 114x9x1 In

OVERVIEW

The B-W1-LB is a slatted wood-plastic composite (WPC) exterior wall panel finished in light brown teak. Manufactured from recycled PVC and wood fiber, these panels are designed for exterior cladding applications on commercial and residential facades, accent walls, and architectural screening projects.

Each panel measures 114.17 in x 8.66 in x 1.02 in and is engineered for waterproof performance and fire retardant properties with zero ongoing maintenance requirements. The composite construction resists moisture, warping, and decay associated with natural wood, making it suitable for exposed exterior environments. Available in four colorways: Light Brown, Dark Brown, Black, and Grey.

No certifications are confirmed in available product documentation. Contractors should verify compliance with applicable local building and fire codes prior to specification.
