

Indoor Wood Panel Corner Trim – Weathered Oak, 114-Inch Length

OVERVIEW

The B-W2-Corner-WO is a corner trim piece designed for use with indoor wood slat wall panel systems. Finished in a weathered oak profile, it provides clean, finished transitions at interior corners and is intended for residential and light commercial interior wall applications.

Constructed from a recycled PVC and wood fiber composite, the panel offers durability and moisture resistance beyond that of natural wood, while maintaining a warm, wood-grain aesthetic. Each corner trim piece measures 114 inches in length with a 1-inch by 1-inch profile, making it compatible with standard wood slat panel installations and manageable for single-person handling during installation.
