

## Indoor Slatted Wood Composite Wall Panel – Driftwood, 114 in., Waterproof

### OVERVIEW

The B-W2-D is an interior slatted wall panel constructed from recycled PVC and wood fiber composite, designed to bring warmth and texture to commercial and residential interior spaces. At 114 inches in length with an 8.6-inch width and 1-inch profile depth, the panel is sized for efficient coverage across large wall surfaces.

The composite construction provides durability and moisture resistance, making it suitable for interior environments where standard wood products may be prone to warping or degradation. The lightweight, manageable form factor simplifies handling and installation without requiring specialized tools or fasteners.
