

Indoor Slatted Wood Composite Wall Panel – Ebony, 114 in., Waterproof

OVERVIEW

The B-W2-E is an interior slatted wall panel constructed from a recycled PVC and wood fiber composite. Finished in an ebony tone, it is designed for commercial and residential interior accent wall applications where a warm, wood-aesthetic appearance is required without the maintenance demands of natural timber.

Each panel measures 114 in. in length with an 8.6 in. width and 1 in. profile depth. The PVC-wood fiber composition provides resistance to moisture and general wear, making the panels manageable to handle and straightforward to install.
