

Indoor Slatted Wood Composite Wall Panel – Jacobean, 114 in., Waterproof

OVERVIEW

The B-W2-J is an interior slatted wall panel in a Jacobean finish, constructed from recycled PVC and wood fiber composite. Designed for indoor accent wall applications, it provides the visual warmth of natural wood while offering the durability and moisture resistance characteristic of PVC-based materials. At 114 inches in length with an 8.6-inch width and 1-inch profile depth, the panel is sized for efficient coverage and straightforward installation.

The composite construction delivers resistance to the dimensional instability common in natural wood, and the lightweight form factor supports manageable handling during installation without specialized equipment.
