

## Indoor Slatted Wood Composite Wall Panel, Waterproof & Fire Retardant, 114 in.

### OVERVIEW

The B-W2-PR is an indoor slatted wall panel constructed from a recycled PVC and wood fiber composite. Designed for interior accent wall applications, it delivers the visual warmth of natural wood while offering the dimensional stability and moisture resistance of an engineered material. At 114 inches in length with an 8.6-inch face width and 1-inch profile depth, the panel is sized for efficient coverage on commercial and residential interior surfaces.

The composite construction provides durability and resistance characteristics not typical of solid wood, and the panel's manageable dimensions support straightforward installation without specialized tooling.
