

Indoor Slatted Wood Composite Wall Panel, White, 114 x 8.6 x 1 in.

OVERVIEW

The B-W2-W is an interior slatted wall panel constructed from a recycled PVC and wood fiber composite. Designed for indoor accent wall applications, it delivers the visual warmth of natural wood while offering the dimensional stability and moisture resistance characteristic of PVC-based materials. Panels measure 114 x 8.6 x 1 in., making them manageable for single-installer handling and straightforward to cut and mount.

The composite construction provides durability advantages over solid wood, including resistance to warping and easier maintenance. The white finish suits a range of commercial and residential interior environments where a clean, contemporary aesthetic is desired.
