

## Indoor Slatted Wood Composite Wall Panel – White Marble, 114 in., Waterproof

### OVERVIEW

The B-W2-WM is an interior slatted wall panel constructed from a recycled PVC and wood fiber composite. Finished in a white marble aesthetic, it is designed for commercial and residential interior wall applications where a clean, textured surface treatment is required. Each panel measures 114 inches in length by 8.6 inches in width with a 1-inch profile depth.

The composite construction provides resistance to moisture and general wear, making it suitable for interior environments where durability is a priority. The PVC and wood fiber blend resists warping and offers easier handling during installation compared to solid wood alternatives. The panel's lightweight profile supports efficient layout and cutting on site.

No certifications have been confirmed in the available source data for this product. Contractors and specifiers should verify compliance requirements with Poli LED & Signs prior to procurement. Warranty terms are not specified in the current product documentation and should be confirmed at time of order.
