

Weathered Oak Slatted Wood Composite Wall Panel, Indoor, 114 in.

OVERVIEW

The B-W2-WO is a classic-style slatted wall panel constructed from a recycled PVC and wood fiber composite. Designed for interior applications, it delivers the visual warmth of wood while offering the durability and moisture resistance characteristic of composite materials. At 114 inches in length with an 8.6-inch width and 1-inch profile depth, the panel is sized for efficient coverage across commercial and residential interior wall surfaces.

The composite construction resists warping and degradation associated with natural wood, and the panel's manageable form factor is intended to simplify handling and installation for contractors working on wall finishing projects.
