

Hollow Steel Wall Frame Holder, 25x30mm, 4-Pack

OVERVIEW

The BS-3025 is a hollow steel wall frame holder designed for mounting and securing framing components in commercial and industrial installations. With a 25x30mm profile (approximately 1 inch diameter, 1-3/8 inch height), it provides a compact, rigid anchor point suitable for wall-mounted signage frames, conduit supports, and similar structural bracketing applications.

Constructed from hollow steel, the holder offers a balance of structural integrity and reduced material weight. The hollow-body design allows for cable or fastener pass-through where installation conditions require it. The compact form factor suits installations where clearance is limited and a low-profile mount point is required.

No certifications, compliance listings, or warranty terms are confirmed in the available source data for this product. Contractors and specifiers should verify suitability for their specific application and jurisdiction prior to installation.
