

## Hollow Stainless Steel Standoff, Matte Finish, Double-Sided, 19 x 50 mm, 3-Pack

### OVERVIEW

---

The BS-5519X is a hollow stainless steel standoff measuring 19 x 50 mm, designed for mounting signage, architectural panels, and display elements to wall surfaces. Its double-sided configuration accepts panels from the front while securing to the substrate from the rear, making it suitable for both interior and exterior sign installations. Each pack contains three standoffs, each supplied with a 20 mm screw for direct attachment.

Constructed from stainless steel with a matte finish, the standoff provides resistance to corrosion in typical commercial environments. The hollow barrel design reduces weight while maintaining structural rigidity adequate for standard signage panel loads. The matte surface finish minimizes glare and presents a clean, professional appearance consistent with architectural millwork and fabricated sign assemblies.

No third-party certifications or compliance listings are confirmed in the available source data for this product. No manufacturer warranty terms are specified in the provided documentation. Installers should verify suitability for load requirements and environmental conditions prior to specification.
