

Stainless Steel Wire System Holder, 40mm Base, 35mm Height, 2-Pack

OVERVIEW

The BS-W-A20 is a stainless steel wire system holder designed as a mounting and support accessory for cable management and wire routing applications. With a 40mm base diameter and 35mm height, it provides a low-profile anchor point suitable for organized wire runs in commercial and light industrial installations.

Constructed from stainless steel, the holder offers inherent resistance to corrosion and mechanical wear, making it appropriate for environments where longevity and finish retention are required. The compact geometry allows for dense spacing along wire runs without interfering with adjacent components or access paths.

No certifications, compliance listings, or warranty terms are confirmed in the available source documentation. Contractors and specifiers should verify suitability for their specific application requirements prior to installation.
