

Stainless Steel Wire System Board Holder, 70mm Total Length, 2-Pack

OVERVIEW

The BS-W-A28 is a stainless steel wire system board holder designed to secure circuit boards during assembly, repair, or inspection tasks. With a total length of 70mm and a 35mm top section, it provides a stable, low-profile grip point suitable for bench-level electronics work in professional and technical environments.

Constructed from stainless steel, the holder offers resistance to corrosion and mechanical wear under regular shop conditions. The wire-form design keeps the board elevated and positioned without obstructing component access. No electrical, thermal, or load-bearing performance data is available from the source documentation.

No certifications, compliance listings, or warranty terms are confirmed in the available source data. Contractors and technicians should verify suitability for their specific application requirements prior to procurement.
