

Touch Dimming Wall Remote, 2.4GHz Wireless, 1-Channel 1-Zone, AAA Battery

OVERVIEW

The C-5IN1-WPR-1 is a 2.4GHz wireless touch dimming wall remote designed for single-channel, single-zone control of compatible Mi-Light and MiBoxer LED lighting systems. It mounts to any wall surface via a screw-fixed base and provides continuous brightness adjustment from 1% to 100% through a capacitive dimming slider, along with dedicated on/off controls and a long-press night light mode.

The remote operates on 2.4GHz RF technology, offering low power consumption, extended transmission range, strong interference resistance, and fast communication response. High-precision IC components provide stable and responsive touch input. Power is supplied by two AAA batteries (included). The unit is rated for dry indoor environments only and should not be used in humid, high-temperature, dusty, or high-voltage conditions, or in areas with strong electromagnetic interference.

No certifications are confirmed in the available product documentation. Contractors should verify compatibility with specific Mi-Light and MiBoxer product series prior to installation, as this remote does not support all devices within those lines. Consult Poli LED & Signs for warranty terms applicable to this SKU.
