

2.4 GHz Mini CCT Remote Control with Magnetic Holder, 30 m Range

OVERVIEW

The C-MH-CCT-GFSK-B is a compact 2.4 GHz RF remote control designed to adjust brightness and color temperature on compatible MiBoxer and Mi-Light 2.4G series luminaires. Intended for commercial and residential lighting control applications, it ships with a magnetic base that mounts via double-sided tape, keeping the remote accessible at a fixed location without hardwiring.

The remote operates on a single CR2032 coin cell (3 V, sold separately), draws less than 6 μ A, and transmits at 6 dBm across a rated control distance of 30 m. The 2.4 GHz GFSK radio provides low interference and fast response. Rated operating temperature is -10 to 40 °C. Controls include dedicated brightness up/down, cool/warm CCT adjustment, on/off, and a SET button for linking and unlinking to compatible fixtures.

No certifications are confirmed in the available source data for this product. Verify compliance documentation with Poli LED & Signs prior to specification.
