

## Rotating Wheel CCT Remote Control, 2.4GHz GFSK, 30m Range

### OVERVIEW

The C-RW-CCT-GFSK is a 2.4GHz rotating wheel remote control designed to adjust color temperature and brightness on compatible Mi-Light and MiBoxer 2.4G series lamps. The rotating dial interface provides intuitive control, and the compact, magnetically mounted design allows the unit to be secured to an included base via double-sided tape for fixed-location use or removed for handheld operation.

The remote operates on a single CR2032 battery (3V, purchased separately), with a standby current draw below 6µA and transmitting power of 6dBm. RF communication operates at 2.4GHz GFSK with a rated control distance of 30m. The unit is rated for operating temperatures of -10°C to 40°C. Linking and unlinking to compatible fixtures is performed through a defined button sequence without requiring additional hardware. Performance may be reduced in environments with heavy metal structures or strong electromagnetic interference.

No certifications are confirmed in the available source documentation for this product.

### SPECIFICATIONS

<b>Operating temp</b>	-10 to 40 °C	<b>Input voltage</b>	3 V
