

## RF Touch Wall Remote for SP5-in-1 Controllers, 3–5 Channel, 2.4G Wireless

### OVERVIEW

The RF Touch Wall Remote (C-SP5IN1-WP3-5) is a 2.4G wireless touch-panel remote designed to work with SP5-in-1 series controllers, supporting control of up to 3–5 channels. It is intended for lighting control applications where wireless operation and multi-zone management are required.

The remote uses 2.4G RF technology for low power consumption, extended transmission range, and strong resistance to interference. It supports one-to-many control (one remote operating multiple controllers) and multi-to-many binding (each controller accepts up to 5 remotes). Zone-based control allows unified or individual zone operation. The touch panel offers high sensitivity with consistent response. The unit is not rated for high humidity, high temperature, dusty, or high-pressure environments, and should be kept clear of strong electromagnetic interference sources.

No certifications are confirmed for this product. Consult your Poli LED & Signs representative for compliance documentation relevant to your project specifications.
