

Heat Shrink Butt Connector Crimp Terminal, 22–28 AWG, 3.2mm OD, Red, 5-Pack

OVERVIEW

The E-CON-HS3.2mm is a heat shrink butt connector crimp terminal designed for electrical and automotive wiring applications. It accepts wire sizes in the 22–28 AWG range and provides a crimped, insulated splice suitable for small-gauge conductor work in confined spaces.

The heat shrink construction provides insulation along with resistance to moisture and corrosion, helping maintain connection integrity in demanding environments. The red color coding supports wire management and indicates compatibility with the applicable gauge range.
