

Die Set for Manual Grommet Punch, Size #2 (9mm)

OVERVIEW

The EQ-PUNCH-M2 is a replacement die set sized for #2 grommets (9mm) and is designed to fit the manual grommet punch machine (SDGM-3). It is used for setting grommets into banners, fabrics, plastics, leather, and similar sheet materials in sign fabrication, canvas work, and general industrial assembly applications.

The die set is machined to produce consistent, repeatable grommet seating at the 9mm size. Each die set weighs 0.13 kg, making it a compact and easily interchangeable component. Compatible grommets for this size measure 9x19x6mm with a per-1,000-piece weight of 0.76 kg, which can assist in estimating material quantities for larger production runs.

No certifications or compliance listings are confirmed in the available source data for this die set. No warranty terms are specified in the current documentation. Contractors and fabricators should verify compatibility with their existing SDGM-3 punch equipment prior to ordering.
