

## LED Tape Sample Booklet — COB & SMD Strips, Multi-CCT and RGB Reference

### OVERVIEW

The M-A5-BOOKLET is a physical A5-format sample booklet produced by Poli LED & Signs for use as a LED tape display and specification reference tool. It is intended for contractors, lighting designers, and specification engineers who need to evaluate strip options across multiple technologies and color outputs side by side.

The booklet contains mounted samples spanning COB and SMD LED tape types, all operating at 24 V DC. White-tunable COB strips are represented at 480 LEDs/m across CCT options from 2400 K to 8000 K, rated at 8 W/m and 800 lm/m on an 8 mm PCB, with CRI >90. Fixed-color COB samples include red, green, blue, purple, golden yellow, pink, ice blue, and marrs green at the same density and power draw. SMD single-color samples cover 2216, 2025, and 2835 packages at 4–15 mm PCB widths, with outputs ranging from 800 to 2280 lm/m and power from 7.2 to 18 W/m. Dual-CCT (2700 K+6500 K) samples include COB and multiple SMD types. Color-changing samples cover RGB, RGBW, and RGBCCT configurations using 3838, 5050, and COB packages, plus addressable IC-controlled strips using WS2812B and WS2811 drivers.

No certifications, compliance markings, or warranty terms are confirmed in the available source data for this booklet item.
