

Track Kit, 3-Circuit, 10 ft., Black

OVERVIEW

The S-TK3C-10M-BK is a 10-foot, 3-circuit recessed track kit finished in black, designed for commercial and industrial lighting installations. It is intended to serve as the infrastructure for track-mounted luminaires in retail, gallery, warehouse, and general commercial environments where multiple independently switched lighting zones are required along a single run.

This track accommodates three conductors, allowing up to three separate circuits to be controlled independently within the same 10-foot section. The recessed mounting configuration provides a clean, low-profile installation that integrates flush with ceiling surfaces. The black finish suits a range of interior aesthetics while minimizing visual distraction from the luminaires themselves.

No certification, compliance, or warranty data was confirmed in the available source documentation for this SKU. Contractors and specifiers should consult the manufacturer's current product literature or contact Poli LED & Signs directly to verify applicable listings and warranty terms prior to specification.
