

End Connector for Track Lighting — Rear Voltage Input, Black

OVERVIEW

The S-TK3CON-BK is an end connector designed for use with compatible 3-circuit track lighting systems. It mounts at the terminus of a track run to deliver voltage input from the rear entry point, completing the electrical connection between the power feed and the track conductors. The black finish integrates cleanly with standard track hardware in commercial and retail installations.

This connector is a passive wiring component with no independently rated electrical output or driver circuitry. It is intended to carry the load current of the connected track system and must be matched to the track gauge and circuit configuration of the installed system. Installers should verify amperage compatibility with the track manufacturer's specifications prior to installation.

No certifications, compliance listings, or warranty terms are confirmed in the available source data for this SKU. Contractors and specifiers should request current documentation from Poli LED & Signs to confirm suitability for jurisdiction-specific code requirements before specifying this component.
