

2-Way Straight Connector for LED Track Lighting Systems

OVERVIEW

The S-TK3H is a 2-way straight connector designed for use with compatible LED track lighting systems. It serves as a joiner component that links two sections of track in a straight-line configuration, allowing installers to extend track runs cleanly and efficiently in commercial and industrial lighting layouts.

This connector is built for reliable electrical continuity between joined track sections. Its straight-through design maintains consistent power delivery along the track run without introducing additional complexity to the installation. The component is intended for indoor track system applications where a low-profile, secure mechanical and electrical connection is required.

No certification, compliance, or warranty data was confirmed in the available source documentation for this product. Contractors and specifiers should consult Poli LED & Signs directly for current compliance status, applicable project requirements, and warranty terms prior to specification or procurement.
