

2-Way 90° Corner Connector for LED Track Lighting Systems, Black

OVERVIEW

The S-TK3L-BK is a 2-way 90° corner connector designed for use with compatible LED track lighting systems. Finished in black, it provides a clean, right-angle junction between two track sections, allowing installers to configure L-shaped track runs in commercial and industrial lighting layouts.

Constructed for reliable mechanical performance, this connector maintains a secure, low-profile connection between adjoining track segments. Its compact form factor suits both new installations and retrofit applications where track routing must change direction within a ceiling grid or surface-mounted run.

No certification, compliance, or warranty data was confirmed in the available source documentation for this SKU. Contractors and specifiers should consult Poli LED & Signs directly for project-specific compliance requirements prior to installation.
