

2-Way 90° Corner Connector for LED Track Lighting Systems

OVERVIEW

The S-TK3L is a 2-way 90° corner connector designed for use with compatible LED track lighting systems. It allows track sections to be joined at a precise right angle, enabling L-shaped or corner-turn configurations in commercial and industrial track lighting layouts. The connector is intended for contractors and installers working with modular track systems where directional flexibility is required.

Constructed for durability, the connector is suited for both indoor applications. Its design provides a stable mechanical connection between track segments while maintaining a low-profile, professional appearance consistent with commercial lighting installations. Specific dimensional and electrical specifications were not available in the provided source data and should be confirmed against the compatible track system documentation before installation.

No certifications, compliance listings, or warranty terms were confirmed in the available source data for this product. Installers should verify compatibility with the intended track system and consult applicable local electrical codes prior to deployment. Contact Poli LED & Signs for additional technical documentation.
