

Flush Mount Magnetic Track Rail, 20 Style, 1M Length

OVERVIEW

The S-TKFT-FM3 is a flush mount magnetic track rail designed for 20 Style magnetic track lighting systems. Constructed from aluminum, this 1M (3.2 ft) rail is intended for recessed or flush ceiling installations where the track sits within a grooved channel cut into the ceiling surface.

The rail is compatible with engroove widths of 31.2–43mm and requires an engroove depth greater than 34.7mm, making it suitable for standard drywall and plaster ceiling applications where a clean, surface-flush appearance is required. The aluminum construction provides structural rigidity while keeping the profile lightweight.
